PROFESSIONAL SUMMARY

Senior DevOps Engineer with 3+ years of experience administering Kubernetes clusters (OpenShift, K3s, AKS), designing scalable cloud infrastructure on Azure, and building secure CI/CD pipelines with Azure DevOps and GitHub Actions. Demonstrated expertise in DevSecOps, Helm-based deployments, container orchestration, and full-stack observability across enterprise banking environments. Proven ability to reduce deployment time, eliminate critical vulnerabilities, and improve incident response time at scale.

TECHNICAL SKILLS

- **Cloud & Kubernetes:** Azure, AWS, OpenShift, Kubernetes (K3s, AKS), Helm, Terraform
- **CI/CD & Automation:** Azure DevOps, Azure Pipelines, GitHub Actions, Jenkins, ArgoCD, GitOps, Docker
- **DevSecOps & Security:** SonarQube, Trivy, Prisma Cloud, NeuVector, Twistlock, HashiCorp Vault
- **Monitoring & Logging:** Prometheus, Grafana, EFK Stack (Elasticsearch, Fluentd, Kibana)
- **Networking & Ingress:** NGINX Ingress Controller, HA-Proxy, OpenShift Router, cert-manager, SSL/TLS, DNS Management
- **Configuration Management:** Ansible
- **Other:** Git, GitHub, Bitbucket, Gogs, Bash, Python, YAML, JSON, Linux Server Administration, API Management

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer

October 2024 – Present

Suez Canal Bank – Digital Factory, New Cairo (El-Rehab), Egypt

- **Kubernetes Scalability:** Identified dependency on persistent VMs as a bottleneck in CI/CD agent management; designed and implemented dynamic agent pool provisioning on OpenShift and K3s clusters, eliminating the need for static VMs and improving pipeline scalability and cost efficiency.
- **CI/CD Pipeline Standardization:** Recognized inconsistency across deployment pipelines causing frequent production incidents; engineered reusable Azure DevOps pipeline templates with environment approvals and service connection governance, resulting in improved deployment reliability and a measurable reduction in production incidents.
- **DevSecOps Integration:** Tasked with achieving zero critical vulnerabilities in container workloads; designed secure multi-stage Dockerfiles for Quarkus and Angular services and integrated SonarQube and NeuVector security scanning into CI/CD pipelines, achieving zero critical vulnerabilities in all pipeline outputs.
- **Big Data Platform Deployment:** Required to deploy a scalable big data platform on Kubernetes; automated infrastructure deployments using Helm charts on OpenShift, successfully delivering a production-grade platform integrating Apache Airflow, Spark, MinIO, Trino, and Lakekeeper.
- **Observability Implementation:** Lack of centralized monitoring was delaying incident detection; implemented end-to-end observability using Prometheus and Grafana across all Kubernetes clusters, improving alerting accuracy and reducing mean incident response time.
- **Centralized Logging:** Deployed EFK stack (Elasticsearch, Fluentd, Kibana) to consolidate log management, significantly reducing mean time to resolution (MTTR) for production issues.
- **Team Leadership & L3 Support:** Managed and triaged DevOps support tickets, coordinated with development teams to resolve infrastructure and pipeline issues, and provided mentorship to junior engineers to improve team capability.

DevOps Engineer

October 2022 – October 2024

Banque Misr – Digital Factory, New Cairo (Fifth Settlement), Egypt

- **Pipeline Development:** Faced with slow, inconsistent release cycles across multiple teams; built and maintained Azure DevOps pipelines and reusable pipeline templates, reducing deployment time and increasing release frequency across all cross-functional projects.
- **Container Security:** Tasked with securing containerized workloads across CI/CD pipelines; integrated Prisma Cloud, NeuVector, and Twistlock scanning tools to automate vulnerability detection, achieving zero critical container vulnerabilities in production.
- **Cross-Team Collaboration:** Collaborated directly with development teams to align CI/CD workflows with evolving business requirements, improving integration stability and accelerating overall delivery velocity.

- **Containerization Optimization:** Identified inconsistent build strategies causing environment drift; developed efficient, standardized Dockerfiles and build processes, improving build times and ensuring cross-environment consistency on Kubernetes.
- **Release Management:** Managed version control workflows and release governance via Azure DevOps, improving team collaboration and deployment stability across the organization.

PROJECTS

Azure AKS Python Microservices DevOps github.com/SherifEmad20/Azure-AKS-Python-Microservices-DevOps

End-to-end Azure cloud infrastructure for deploying Python microservices on AKS with full CI/CD automation and observability.

- Provisioned Azure Kubernetes Service (AKS) and Azure Container Registry (ACR) using Terraform, automating the full cluster lifecycle from initialization to production-ready state.
- Deployed self-hosted GitHub Actions runners on a K3s cluster via StatefulSets, enabling secure, isolated CI/CD execution within private infrastructure.
- Built a complete GitHub Actions CI/CD pipeline to build Docker images, push to ACR, and deploy Python microservices to AKS on every code push with zero manual intervention.
- Configured NGINX Ingress Controller for traffic routing and integrated cert-manager for automated SSL/TLS certificate provisioning via Let's Encrypt.
- Deployed the kube-prometheus-stack (Prometheus and Grafana) for full cluster observability, with Grafana dashboards exposed via secured ingress at a live public URL.

Jenkins and Ansible Automation github.com/SherifEmad20/Jenkins-Ansible-Automation

Multi-node CI/CD automation system integrating Jenkins, Ansible, and Gogs for infrastructure provisioning and server configuration.

- Designed a multibranch Jenkins pipeline integrated with a self-hosted Gogs Git server via webhooks, enabling automatic pipeline triggering on every code push event.
- Configured a remote Jenkins agent on a dedicated VM using SSH-based authentication and Jenkins credential management, enabling distributed pipeline execution across nodes.
- Authored an Ansible playbook to automate NGINX installation, service configuration, and startup on remote hosts, executed directly from within the Jenkins pipeline.
- Automated Linux user provisioning across remote nodes using Bash scripts with sudo credentials securely injected via Jenkins credentials manager.
- Implemented post-pipeline email notifications reporting execution status, timestamps, and provisioned group membership, improving pipeline visibility and auditability.

EDUCATION

Cairo University – Faculty of Computer Science and Artificial Intelligence
Bachelor of Science in Software Engineering

2019 – 2023
